Why choose MULTIMAT?

All these benefits in one product:

www.equimats.com

Optimal Cushioning

Our mats provide a shock absorbing surface that mimics natural ground, providing a comfortable and supportive surface whether at home, at the gym, or at work.

Multimats are available in multiple densities and thicknesses to meet the cushioning needs for any space.

- Fitness areas, gyms & studios
- Commercial spaces
- Recreational areas
- Sports studios

Lightweight Design

Multimats are made from a lightweight EVA/virgin rubber composite making them exceptionally easy to install, reconfigure or take along with you if you move.

Interlocking Edges

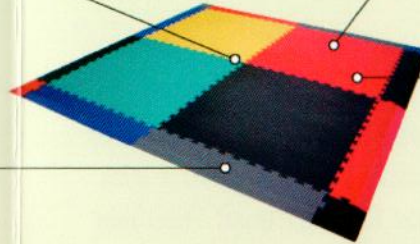

Interlocking edges allow Multimats to easily fit together like a puzzle in any size space. Once fit, the mats are then firmly locked in place.

While being easy to put down, these mats are just as easy to take up to transport or reconfigure.

Non-Porous Material

Multimats are made from a special non-porous composite of virgin rubber and EVA foam for optimum hygiene, support and cushioning.

This non-porous material doesn't absorb sweat, bacteria or moisture of any kind, making it hygienic, easy to maintain and long lasting.
